Profile

Full-stack engineer who ships production AI products end to end. I have independently built and operated AI systems that orchestrate large language models and generative-media APIs into real, revenue-generating tools, from web scraping and brand intelligence to multi-stage video-ad generation pipelines. Six years across TypeScript/Node, Python, React and Solidity, with deep experience wiring third-party AI models (LLMs, image and video generation) into reliable queue-based backends. I build the whole stack: data ingestion, model orchestration, job pipelines, and the front-end that makes it usable.

I also bring rare commercial context for AI products in regulated and Gulf markets — direct experience with UAE corporate, licensing and compliance operations — which lets me build AI tools that actually fit how businesses here work.

Founder & Flagship AI Products

Founder & Engineer — Qumak (qumak.io) 2026 – Present

AI marketing-intelligence & ad-generation platform for Gulf SMBs and agencies

- Designed and built, solo, an end-to-end **URL-to-Ads pipeline**: paste a brand URL → automated multi-page scraping → brand-kit, palette and social-handle extraction → competitor ad intelligence → AI-generated image and video ads.
- Engineered a **multi-stage video-ad generation system** that decomposes an ad into a shot recipe, generates each shot in parallel through generative-video models (fal.ai — WAN, Kling, Seedance), syncs results back via a worker, and assembles a single branded ad with FFmpeg (concat, audio bed, text/logo compositing).
- Built a **character-consistency layer** using multi-reference image conditioning so the same presenter, product and scene persist across every clip of an ad — addressing the core quality gap in AI UGC video.
- Architected the backend on **Node/Express, MongoDB, BullMQ/Redis job queues and Cloudflare R2**; integrated Stripe billing (subscription tiers + credit packs) with webhook-driven credit grants.
- Implemented an **LLM-driven intelligence engine** (ad 'roast', money-math, competitor analysis) with strict anti-fabrication prompt controls, plus a manifest-driven model system so new generation models are added by config rather than code.
- Stack: TypeScript, Node, React/Vite, Python, MongoDB, Redis/BullMQ, fal.ai, Apify, Azure TTS, Cloudflare R2, Stripe.

Technical Lead — Tammat (tmmt.ae) 2025 – Present

AI-powered UAE visa & document-processing platform

- Built an **AI assistant for UAE visa and residency processing** that answers applicant queries and routes billable cases to human officers — combining LLM chat with a structured service catalogue (overstay fines, status checks, travel-ban, Amer services).
- Reached **AED 15K MRR and processed 214 applications**; designed the anonymous-access chat, login-gated escalation, and Stripe-based paid-checker services.
- Owned the full stack — React front end, Node API, payment integration, and the AI conversation layer — and the domain modelling of UAE government workflows.

Professional Experience

AI Operations & Compliance Lead — Mobius Network (Artificial Intelligence) 2025 – Present

- Operate at the intersection of an AI company and UAE regulation — leading licensing, regulatory setup and compliance across DIFC, ADGM and VARA, and acting as the single point of contact with authorities, banks and auditors.
- Managed end-to-end corporate, tax (VAT and corporate tax) and visa operations, enabling the company to scale and raise without regulatory friction.
- Represented the company at **Token2049 Singapore (Origins Hackathon)**, coordinating regulatory and product positioning with global stakeholders.

Full-Stack Web Developer — Emirates National Schools 2023 – Present

- Led development of an education platform in React and TypeScript with fine-grained access control over sensitive student data.
- Automated the admissions workflow with smart contracts for a **~30% efficiency gain**; integrated payment gateways into a fee-management system and built a multi-department intranet with Docker/Kubernetes.
- Built a system to issue graduation certificates as NFTs on Polygon for tamper-evident, auditable records.

Blockchain Developer — Kryptohive / Pontem Network 2022 – 2023

- Built the **Pontem Wallet** front end in React — wallet infrastructure that grew to **1M+ users** on Aptos.
- Wrote and audited **LiquidSwap** DEX smart contracts in Move, cutting swap transaction costs ~10%; supported a token launch that drove 200K+ active users.

Full-Stack Developer — XP Network 2021 – 2023

- Engineered cross-chain NFT-bridge tooling and 5 reusable cross-chain libraries, improving platform efficiency ~25% and reducing the codebase ~10%.

Frontend Developer — Precise Tech 2020 – 2021

- Delivered front-end and integration work across e-commerce, real-time chat and cloud-architecture projects for early clients.

Technical Skills

AI / ML Engineering: LLM orchestration & prompt engineering, generative video/image APIs (fal.ai — WAN, Kling, Seedance), multi-reference conditioning, Azure TTS, retrieval & intelligence pipelines, anti-hallucination prompt design

Backend & Infra: Node.js, Express, Python, MongoDB, Redis, BullMQ job queues, Stripe, Cloudflare R2, Docker, Kubernetes, FFmpeg, Apify, REST/WebSockets

Frontend: TypeScript, React, Next.js, Vite, React Native, Tailwind CSS, Three.js, Figma

Web3: Solidity, Move, Hardhat, Ethers.js, cross-chain bridges, smart-contract auditing (Aptos, Ethereum, Polygon, BSC)

Domain: UAE corporate structuring, licensing (DIFC/ADGM/VARA/DED), visa & PRO processing, VAT & corporate-tax compliance

Education & Certifications

- **B.Sc. Computer Science — Quaid-e-Azam University, Islamabad**
- Token2049 Singapore — Origins Hackathon participant (2025); presented Tammat AI
- Certified Blockchain Expert (Blockchain Council) · Solidity Smart Contract Development (CryptoZombies)
