PROFILE

AI Solutions Architect and hands-on engineer who finds expensive manual operations inside businesses and replaces them with production AI systems people actually adopt. I own the full arc: discovery and process audit, solution architecture, LLM orchestration with human-in-the-loop controls, queue-based backends, integration with the systems a business already runs (ERP, e-commerce, payments, couriers, messaging), and the measurement that proves ROI. Six years across TypeScript/Node, Python, React and Solidity; founder of a revenue-generating AI platform; rare commercial depth in Gulf-market operations, licensing and compliance that makes my systems fit how businesses here actually work.

IMPACT HIGHLIGHTS

- **Day-one delivery on consulting:** replaced a luxury e-commerce brand's manual bookkeeping with an AI pipeline (Claude extraction → Telegram approval → Zoho Books) on the first day of the engagement; full automation roadmap projected to recover 100+ staff-hours/month.
- **Founded and solo-built Qumak:** URL-to-Ads intelligence and generation platform orchestrating LLMs and three generative video model families into a paid, subscription-billed product.
- **Scaled an AI service business:** Tammat AI visa platform reached AED 15K MRR with 214 processed applications on an AI chat + human-escalation model I designed end to end.
- **Consumer-scale engineering:** built the Pontem Wallet front end that grew to 1M+ users on Aptos.

EXPERIENCE

AI Solutions Consultant — OmniaStores.ae — luxury e-commerce, Dubai *2026 – Present*

- Engaged to eliminate manual operations spanning 40–60 orders/day across two storefronts (Shopify, WooCommerce), six payment providers (Stripe, Tabby, Tamara, Telr, Checkout.com, COD), two courier networks (SMSA international, OnTrack domestic) and Zoho Books bookkeeping.
- Shipped, on day one, a Telegram-first bookkeeping system: statement upload → Claude-based transaction extraction and 13-category chart-of-accounts classification → inline approval buttons → staged audit copy in Google Sheets → plain language AI corrections → Zoho Books publish → aggregated cost summary to the owner's phone. Human approval gates every posting decision.
- Architected the retention roadmap: webhook order ingestion, WhatsApp-to-Draft-Order conversion, courier API automation with tracking write-back, and per-gateway payout reconciliation surfacing true net margin by payment method – projected 100–145 staff-hours/month recovered.

Founder & Principal Engineer — Qumak (qumak.io) — AI marketing intelligence & ad generation *2026 – Present* • Designed and built, solo, an end-to-end URL-to-Ads pipeline: brand URL → multi-page scraping → brand-kit, palette and social extraction → competitor ad intelligence → AI-generated image and video ads.

- Engineered a multi-stage video-ad system: LLM decomposes each ad into a shot recipe, shots render in parallel across fal.ai models (WAN, Kling, Seedance) with multi-reference character consistency, and FFmpeg assembles the branded final cut — orchestrated on BullMQ/Redis workers with Cloudflare R2 storage.
- Built a manifest-driven model system (new generation models added by config, not code) and an LLM intelligence engine (ad roast, money-math, competitor analysis) with strict anti-fabrication prompt controls.
- Integrated Stripe subscriptions and credit packs with webhook-driven grants; priced against real per-generation model costs to protect margin.

Technical Lead — Tammat (tmmt.ae) — AI visa & document processing, UAE *2025 – Present* • Built an AI assistant for UAE visa and residency processing that answers applicant queries and routes billable cases to human officers — LLM chat over a structured service catalogue (overstay fines, status checks, travel bans, Amer services). • Reached AED 15K MRR and 214 processed applications; owned the React front end, Node API, Stripe payments and the escalation and paid-checker product design.

Head of Architecture & Compliance — Mobius Network (mobiusdtaas.ai) — AI / RWA infrastructure *2025 – Present*
RWA Platform Engineering**:** Architected and engineered an enterprise-grade Real-World Asset (RWA) tokenization platform supporting the ERC-3643 standard, implementing decentralized OnchainID identity protocols and automated

KYC integrations to guarantee compliant asset transfers.

- Multi-Asset Framework**:** Designed and deployed scalable smart contract infrastructure supporting tokenization across fractionalized rental real estate, unpaid invoices, equity, and private credit, integrating multi-token liquidity pools (USDT, native ERC-20s) with MoonPay fiat-to-crypto gateways.
- Regulatory Sandboxing**:** Orchestrated the institutional architecture to successfully sandbox the infrastructure under the regulatory oversight of the Abu Dhabi Global Market (ADGM) FSRA, mitigating structural legal risks for institutional asset issuers.
- Gulf Corporate Licensing**:** Led end-to-end corporate structuring, commercial licensing, and cross-border regulatory setup across VARA and ADGM, serving as the single technical point of contact for banks, authorities, and external auditors to eliminate fundraising friction.
- Global Ecosystem Representation**:** Spearheaded technical product positioning and compliance roadmaps with institutional stakeholders globally, representing mobius at Token2049 Singapore (Origins Hackathon).

Full-Stack Web Developer — Emirates National Schools *2023 – Present*

- Led development of a React/TypeScript education platform with fine-grained access control over sensitive student data; automated admissions for a ~30% efficiency gain and issued graduation certificates as NFTs on Polygon for tamper-evident records.

Blockchain Developer — Kryptohive / Pontem Network *2022 – 2023*

- Built the Pontem Wallet front end in React (1M+ users on Aptos); wrote and audited LiquidSwap DEX contracts in Move, cutting swap costs ~10% and supporting a launch that drove 200K+ active users.

Earlier roles — XP Network (cross-chain NFT tooling) · Precise Tech (front-end) *2020 – 2023* • Engineered cross-chain NFT-bridge tooling and 5 reusable libraries (~25% platform efficiency gain); delivered e-commerce, real-time chat and cloud integration work for early clients.

SOLUTION ARCHITECTURE & TECHNICAL SKILLS

AI Solution Architecture: LLM orchestration (Anthropic Claude, structured extraction, anti-hallucination design), human-in-the loop approval flows, agentic workflow automation (n8n, BullMQ/Redis), generative media pipelines (fal.ai — WAN, Kling, Seedance), retrieval & intelligence engines, Azure TTS

Business Systems Integration: Zoho Books, Shopify & WooCommerce, Telegram & WhatsApp bots, Stripe / Tabby / Tamara / Telr / Checkout.com, Google Workspace, courier APIs (SMSA, OnTrack, DHL), Apify

Backend & Infrastructure: Node.js, Express, Python, MongoDB, Redis, Docker, Kubernetes, Cloudflare R2, FFmpeg, REST/WebSockets

Frontend: TypeScript, React, Next.js, Vite, React Native, Tailwind CSS, Three.js, Figma

Web3: Solidity, Move, Hardhat, Ethers.js, cross-chain bridges, smart-contract auditing (Aptos, Ethereum, Polygon, BSC)

Gulf-Market Domain: UAE corporate structuring, licensing (DIFC / ADGM / VARA / DED), visa & PRO processing, VAT & corporate-tax compliance

EDUCATION, CERTIFICATIONS & LANGUAGES

- B.Sc. Computer Science — Quaid-e-Azam University, Islamabad
- Token2049 Singapore — Origins Hackathon participant (2025); presented Tammat AI
- Certified Blockchain Expert (Blockchain Council) · Solidity Smart Contract Development (CryptoZombies)
- English Fluent (IELTS) · German (A2)
- Driving License (Dubai, UAE - 2025)
